## PRODUCT INTRODUCTION

Prunes

HS CODE: 081320

The homeland of plum in Kyrgyzstan is usually called the Aksy and Alabukinsky districts of the Jalalabad region. Up to 30 thousand tons of crops are harvested here annually. In Kyrgystan «Kyrgyz excellent» sort of plums are cultivated. The trees of this plum variety are distinguished by good winter hardiness, give a large number of purple or dark red fruits that ripen in late July - early August and gain weight up to 100 g. Kyrgyz prunes are an environmentally friendly product, because no chemicals are used in its cultivation.

**PLUM IN KYRGYSTAN  
GROWS IN REMOTE AND  
ECOLOGICALLY CLEAN  
MOUNTAINS AT 1600 m.**

Only mature, juicy and undamaged plums are processed. They are washed, sorted from shaking sieves, cleaned and pitted or cut depending on the variety. Then the fruits are dried; this usually happens in the sun or in special drying machines. Some prunes producers have "Organic" certificate. For organic dried fruits, chemical-synthetic pesticides are not used in fruit cultivation. Instead, pest control takes place naturally.

## REASONS TO BUY

- **FSSC 22000 CERTIFICATION**
- **"ORGANIC" CERTIFICATION**
- **NUTRIENT RICH**
- **NO ADDED SULFURS, SUGARS OR SYRUPS**
- **SUN-DRIED**

## INDUSTRY PERFORMANCE

### EXPORT VALUE (USD THOUSAND)

### EXPORT DESTINATIONS IN 2019

■ Germany ■ Russian Federation ■ Turkey ■ Belgium ■ Kazakhstan

## TESTIMONIALS

KEES MARIS  
Director Project Division  
Morgenland Bio, EgeSun GmbH

I was excited right from the beginning about the taste of the prunes. The prunes are juicy, of excellent quality and outstanding taste.
